

Canada Land Inventory

Through maps and reports Lands, continues to provide information on land capability for most parts of southern Canada. Topical coverage includes agriculture, forestry, wildlife, outdoor recreation and sport fishing.

Canada Land Use Monitoring

Changes in the use of Canada's prime resource lands are monitored by amount and location. The significance of these from national and key sustainable resource perspectives is evaluated.

Northern Land Use Information Series

An integrated regional overview of the main environmental and social aspects of the Canadian Territories is provided through this map and report series.

Ecological Land Research

Lands conducts research on the various ecosystems throughout Canada including such specialized types as wetlands. This provides the basis for conservation strategies and determining the impacts of disturbances such as acid rain.

Canada Geographic Information System

A world-class computer system permits the integration of several national data bases. This allows managers and policy makers to manipulate data for resource analysis and planning and to display the results in a variety of tabular and cartographic formats. Services and training are also offered to agencies on a cost-recovery basis.
